

**IMPORTANT! This mailbox is intended to be mounted under an eave or another protected area.**

### Hardware (included)

### Tools (not included)

- 1** Using the guide on the back of these instructions, mark the wall at the center of each crosshair. Use a level to ensure a straight installation (optional).

- 2** Drill into the wall at each marked location. Use a 1/4" drill bit for brick or other masonry wall. Use a 1/16" drill bit for wood wall.

1/4" masonry bit  
- or -  
1/16" wood bit

- 3** Skip this step if installing into wood.

Insert the included plastic anchors into the drilled holes. Gently tap them in if necessary.

- 4** Insert the screws into the bottom two drilled holes and secure with a screwdriver. Hang the mailbox onto the secured screws using the bottom eyelet holes on the back of the mailbox.

- 5** While the mailbox is hanging on the bottom screws, insert the remaining two screws into the top holes and secure with a screwdriver.

**Use this guide to mark the hole locations -  
make sure the page is level before marking.**
