

## Features & Benefits

Double door allows you to conveniently collect your mail from the front or from the back!

### Quiet Early-Morning Delivery

The lid opens and closes with a soft sound. We use a plastic rotary catch and EDPM (foam rubber) packing so that the closing sound does not escape the inside of our mailboxes. Sleep peacefully knowing that you don't have to worry about getting awakened by the early morning mail delivery. In addition, all Dea's Garden mailboxes are sturdy enough to clear a strength test where they are opened and closed 30,000 times.

### Damper cushioning prevents damage to lids

We have attached urethane damper cushioning to the lids of our mailboxes, which prevents damage to the lids and to the wall, post or underside of the mailbox when the lids are fully open.

### Pick up mail from the front or the back!

Conveniently collect mail from the front or from the back.

### Neoprene-Styrene Rubber Liner

The inside liners of our mailboxes are made from neoprene-styrene rubber, which doesn't warp or curl, so it is easy for the mail carrier to slide your mail into the box.

### Mailboxes feature a new material

We use light, strong fiberglass reinforced plastic (FPR, used in surfboards and boats) on our mailboxes, and the texture feels even more genuine than plaster or terra cotta.

Craftsmen pour their hearts into making our mailboxes by hand, creating fine finished products that brim with a genuine feel. In addition, hinges and other metal parts are made of stainless steel.

### Weather-resistant paint makes maintenance easy

The mailboxes are protected using acrylic urethane paint, which holds up well against the elements. Taking care of your mailbox is as easy as rinsing it with water or wiping it with a cloth. You can use a mild detergent diluted in water for persistent dirt and grime.
